INTRODUCTION

With the publication of this second supplement, NASA SP-7006 (02), to the original issue of the Continuing Bibliography on "Bibliographies on Aerospace Science" (SP-7006), the National Aeronautics and Space Administration continues its program of periodic distribution of selected references to subjects of interest to the aerospace community. The references are assembled in this form to provide a convenient source of information for use by scientists and engineers who need this type of specialized compilation. Continuing Bibliographies are updated periodically by supplements which can be appended to the original issue.

All references in SP-7006(02) are bibliographies that have been announced in *Scientific and Technical Aerospace Reports (STAR)*, *International Aerospace Abstracts (IAA)*, and the NASA Continuing Bibliography *Aerospace Medicine and Biology* (NASA SP-7011 and its supplements). They were introduced into the NASA information system during the period February, 1965–April, 1966. Produced by a variety of private institutions and governmental organizations, each one provides a listing of references to some aspect of aerospace science.

Each entry in the bibliography consists of a citation and, when available, an abstract. The listing of entries is arranged in two major groups. Report literature references are contained in the first group and are subdivided according to their date of announcement in *STAR*. The second group includes journal and book references subdivided according to date of announcement in *IAA*, or in *Aerospace Medicine and Biology*.

A subject index and a personal author index are also included.

AVAILABILITY OF DOCUMENTS

STAR Entries (N65, N66)

NASA documents listed are available without charge to:

1. NASA Offices, Centers, contractors, subcontractors, grantees, and consultants.
2. Other U.S. Government agencies and their contractors.
3. Libraries in the United States that maintain collections of NASA documents for public reference.
4. Other organizations in the United States having a need for NASA documents in work related to the aerospace program.
5. Foreign government or academic (university) organizations that have established reciprocal arrangements for the exchange of publications with NASA, that have current agreements for scientific and technical cooperative activities with NASA, or that have agreements with NASA to maintain collections of NASA documents for public use.

Non-NASA documents listed are provided by NASA without charge only to NASA Offices, Centers, contractors, subcontractors, grantees, and consultants.

Organizations and individuals not falling into one of these categories may purchase the documents listed from either of two sales agencies, as specifically identified in the abstract section:

Clearinghouse for Federal Scientific
and Technical Information (CFSTI),

SOURCES OF INFORMATION IN HUMAN FACTORS ENGINEERING, INCLUDING ASSOCIATED AREAS IN SYSTEM SAFETY, MAINTAINABILITY, PERSONNEL SUBSYSTEM, LIFE SCIENCES, QUALITY ASSURANCE, AND RELIABILITY ENGINEERING

George A. Peters and Frank S. Hall 1 Jan. 1965 168 p refs (RH-3398-H)

The 380 reference sources listed include bibliographies, directories, abstract services, journals and textbooks of technical information in the field of human factors engineering. There are 371 regulatory and guidance documents referred to, including various regulations, specifications, standards, manuals, instructions, and program requirements that attempt to define the character of the contractor's human factors functions. Ninety descriptive publications are a sampling of government agency reports that attempt to describe how various functions might be accomplished, review the state-of-the-art in a given area, present new methods, or list basic data which might be useful in human factors analyses. Sixty-five illustrative reports are a cross section of contractually required or data submittal reports that are representative of what was actually accomplished, how it was done, and the type of organization or approach that was utilized. PHENOMENA IN THE UPPER ATMOSPHERE. COMPILATION OF ABSTRACTS Surveys of Soviet-bloc Scientific and Technical Literature

12 May 1964 20 p refs

(AID-P-64-34) OTS: HC \$1.00/MF \$0.50

Abstracts of reports concerning solar radiation and the ionosphere include those on the magnetic field in sunspot regions, ionization of the night atmosphere, chemical composition of the solar atmosphere, and nuclear processes in chromospheric flares. One report on Van Allen belts and cosmic rays is included that deals with corpuscular streams causing the diurnal cosmic ray effect. In the field of atmospheric electricity, reports on the structure of the atmospheric electric field, electrical processes during cloud development and precipitation, fog electricity, and

electricity during thunderstorms are reviewed. An abstract of a report on argon ionization in the upper atmosphere is also included. D.S.G.

This is a bibliography of documents that will be considered in providing an accurate definition of the space, lunar, and planetary environments as they affect flight mechanics and the aerodynamic aspects of space travel. Present knowledge of the space environment is quantitatively incomplete. Concepts and ideas develop and change rapidly, and continual updating of this bibliography is necessary to keep abreast of the ever-expanding understanding of the space environment. Each of the documents contained herein will be considered and analyzed; this bibliography will be revised and updated, and only the most pertinent documents will be listed in the final report.

 W. E. Woolf Dec. 1963 163 p refs
 (Contract NAS8-5292)

(NASA-CR-60526) OTS: HC \$5.00/MF \$1.00

A bibliography containing 477 entries on the subject of electrical impedance between mating metallic surfaces, is presented; in most cases an abstract is included. The report contains a brief analysis or survey of results related to topics such

as measurement of low impedance bonds, physical and chemical factors affecting the bond, changes of bond impedance with time, and lesser known methods of determining bond characteristics. Author

AN ANNOTATED BIBLIOGRAPHY OF SPACE VEHICLE REENTRY AND ASSOCIATED PHENOMENA Technical Documentary Report, Jan. 1956-Mar. 1963
 R. H. Schorsch, comp. Oct. 1963 461 p
 (SSD-TDR-63-389; AD-427564)

This annotated bibliography results from an extensive literature survey of the theory and physical phenomenon associated with the reentry of space vehicles, and related information such as the interaction of electromagnetic waves with the hypersonically generated ionized sheath, techniques of reentry trajectory analysis and optimization, structural and material considerations, and many others. Only a limited number of references pertaining to specific reentry projects, such as the Mercury and Dyna-Soar Programs, are included. Literature surveyed covers the time period from January 1956 through March 1963, comprising 1150 references which are listed alphabetically by author or by originating agency if the author is unknown. The Armed Services Technical Information Agency (ASTIA) document numbers are also included, when available, to facilitate ordering. Author

The literature survey was completed and analysis of the data was initiated. The completed bibliography is included. The listed documents were separated into major environment groups and alphabetized under each environmental parameter. The information contained emphasizes radiation, space debris, and magnetic fields of interplanetary space, with cosmic rays and solar phenomena being treated secondarily. The lunar environment section is concerned with the geological aspects of the lunar surface, the atmosphere, and meteoroid environment. The planetary environment section deals largely with the definition of the various atmospheric structures. The sources of information for this bibliography are books, periodicals, meeting papers and conference proceedings, translations of foreign articles, and scientific and technical aerospace reports. AEROSPACE MEDICINE AND BIOLOGY — A CONTINUING BIBLIOGRAPHY

Jan. 1965 182 p refs

(NASA-SP-7011(06)) OTS: HC \$1.00/MF \$1.25

Subjects covered are the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. In addition, similar effects on biological organisms of lower order are included. Related topics such as sanitary problems, pharmacology, toxicology, safety, and survival, life support systems, exobiology, and personnel factors receive appropriate attention. AN ANNOTATED BIBLIOGRAPHY OF RESEARCH ON THE STRUCTURAL AND PHYSICAL PROPERTIES OF ZIRCONIA

Berthold C. Weber Nov. 1964 94 p refs

(ARL-64-205; AD-610758)

This bibliography covers the literature of the past 35 years although some older references are included because they are often quoted. Three hundred and seven references have been individually evaluated. The discussion of the subject is arranged in 12 sections dealing with topics of particular interest to the researcher. It is emphasized that inadequately defined test materials and insufficient control of experimental conditions are the main reasons for conflicting literature data concerning the structural and physical properties of zirconia. AEROSPACE MEDICINE AND BIOLOGY A Continuing Bibliography

Feb. 1965 112 p refs

(NASA-SP-7011(08)) CFSTI: HC \$1.00/MF \$0.75

An annotated bibliography is given of unclassified reports and journal articles that were introduced into the NASA information system during this period. The subject matter covers biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the atmosphere or in space. These

références were announced previously in separate publications by the Library of Congress, the American Institute of Aeronautics and Astronautics, and NASA. The references are indexed by subject, corporate source, and personal author.

LONG-RANGE PLANNING AND TECHNOLOGICAL FORECASTING: AN ANNOTATED BIBLIOGRAPHY, SUPPLEMENT I

Peter R. Stromer, comp. Feb. 1965 40 p refs

(LMSC-5-10-65-3; SRB-65-1)

Emphasis is on planning within the aerospace and defense industry. During the past year both industry and government conducted introspective studies on such topics as potential convertibility of admitted industry overcapacity to peaceful pursuits and the economic impact of reductions in defense spending. Desirable diversification strategies and goals were rigorously assessed. While general conclusions may be lacking, sufficient data are available to aid in the decision-making process.

 Milton W. Green 8 Jan. 1965 13 p refs
 (Contract Nonr-3212(00))
 (AD-610095)

The historical development of neuristor research activities, including the areas in which substantial progress was made, and the difficulties encountered in practical device realization are summarized. Logic studies were the subject of a very thorough treatment. As a result there now exists a comprehensive logical design basis for general neuristor systems. Basic problems involved in neuristor development, and the conflicting requirements for semiconductor materials are discussed. Also, solid-state lines that avoid the use of junctions were also studied. It was noted that although experimental semiconductor neuristors were nondistributed and relatively impractical, they did furnish the only demonstration of an all-electric neuristor device with logical capability. It was concluded that it will be an extremely difficult technical feat to achieve neuristor systems that are in any sense competitive with present logic devices.

ESTIMATING METEOROLOGICAL EFFECTS ON RADAR
PROPAGATION, VOLUME I
 W. B. Moreland Jan. 1965 207 p refs
 (TR-183, Vol. I; AD-459466)

Observed operational anomalies in radio-radar equipment performance and the important physical phenomena producing these anomalies are discussed. The most important contributing phenomenon in the explanation or prediction of anomalous performance is atmospheric refraction. Methods are presented for describing the refractive properties of an atmosphere in terms of specific refractivity conditions. The mechanisms of propagation from a transmitter to a point in space and several meteorological effects on these mechanisms are considered. Graphical methods are shown for computing bending, elevation angle, range, and height errors caused by atmospheric refraction. Refractivity climatology is discussed in connection with synoptic applications. General procedures for translating this information into useful propagation criteria are given, and operational procedures for meteorological support of radar missions are suggested. E.P.V.

An annotated bibliography of the surface characteristics of Mars, Venus, and the Moon is presented with emphasis on light polarization and albedo measurement techniques as well as radio-astronomical studies. Information on tektites is also presented. The report covers 125 research studies from the years 1960 to mid-1963. More recent findings from about mid-1963 through mid-1964 are included in appendixes A to C.

Apr. 1965 96 p refs

(ORNL-RMIC-3 (Rev.))

An annotated bibliography is presented on the transition metals of periodic table groups IV, V, and VI. General headings for the topics are preparation methods, crystal structure, phase transitions, transport properties, and physical and mechanical properties. Specific topics include polymorphism, defects, characterization and assay methods, diffusion, electrical and thermal conductivity, heat capacity, deformation, hardness, and magnetic properties. Informative abstracts are included for most titles.

(STL-9990-6903-KU-000)

This bibliography consists of 348 annotated references dealing with manned Mars flyby and stopover missions, unmanned precursor missions, and Earth-based studies of Mars. The majority of the items are those published from 1955 to January 1965. The abstracts are primarily written by the authors. If an author does not include an abstract with his paper, one is prepared from the text of the report using the author's words; if this is impractical, a brief summary statement or table of contents is provided.

This project involved the fields of photochromism and phototropism. Most of this R&D has been concentrated in the visible, near-infrared, and ultraviolet ranges of the spectrum. Basic research in these fields has been oriented toward elucidating the reaction mechanisms of these compounds. Applied research programs have resulted in the synthesis of new reactive materials and new improved concepts for application of reversible systems. Possible uses of these systems include eye-protective devices, optical memory devices in computers, and modulating or monitoring light valves.

An annotated bibliography containing earlier and current literature on low-temperature X-ray diffraction techniques is presented. Emphasis has been placed on recent literature and the study of low melting crystalline solids. Among the apparatus included are an X-ray camera for powder diagrams at any temperature, a liquid helium cryostat for X-ray diffraction studies, a low-temperature apparatus for single crystal X-ray goniometers, and a method of stabilizing the specimen temperature for single crystal X-ray crystallography. Among the crystal structure investigations cited are an X-ray investigation of potassium phosphate at low temperature, X-ray studies on cetyl alcohols, the low temperature modification of N-propylammonium, and the thermal expansion of solid bromine.

Torsten Ericsson 1964 109 p refs In SWEDISH; ENGLISH summary (Publ-147)

A literature study on results from isothermal low cycle strain fatigue experiments using austenitic stainless steel and nickel alloys, as well as other materials, was conducted. Low cycle fatigue after less than 10^5 cycles is expressed in the equation:

$$\Delta \epsilon_p N_F^m = C$$

where N_F is the fracture value and the plastic strain range is $\Delta \epsilon_p$. The constant C is mostly a little higher than half the fracture ductility ϵ_F of a simple tensile test. Tests performed with constant stress and constant strain amplitude contribute differently to the cycles to fracture. Grain size and the orientation of a specimen in relation to the rolling direction had little influence on the fracture value. Neutron irradiation on stainless steel simultaneously with cycling diminishes the fracture value. A compilation and comparison of low cycle strain fatigue tests of various materials are presented in tables. G.G.

This annotated bibliography contains references on the crystal structure of solid hydrogen, deuterium and tritium. The literature indicates that most of the research on the subject has been conducted in the Soviet Union and a lesser amount of research has been conducted in Canada, Great Britain, Japan, Israel and the Netherlands. Because the literature shows ambiguities in the research findings, it is apparent that further research is required in order to determine the exact crystal structure of solid hydrogen.

SILICON CARBIDE FOR SEMICONDUCTORS
 Gus J. Caras Feb. 1965 201 p refs
 (RSIC-381; AD-464777)

This state-of-the-art survey on silicon carbide for semiconductors includes a bibliography of the most important references published as of the end of 1964. The various methods used for growing silicon carbide single crystals are reviewed, as well as their properties and devices fabricated from them. The fact that the state-of-the-art of silicon carbide semiconductors is not further advanced may be attributed to the difficulties of growing single crystals of sufficient size and purity for semiconductor applications. Of the various methods of growing silicon carbide, growth by sublimation appears to be the most successful method. There is considerable variation in the properties of silicon carbide as reported in the literature, mainly because most measurements were conducted on crystals with varying amounts and types of impurities. In the area of devices, rectifiers capable of 500°C operation and unipolar transistors exhibiting power gain at temperatures greater than 500°C have been fabricated. Other devices which have received attention include diodes, photoelectric and electroluminescent devices, and electron emission components. Author

SOVIET LITERATURE ON LIFE SUPPORT SYSTEMS. PART A: BIOSCIENCES Surveys of Soviet-Bloc Scientific and Technical Literature

30 Dec. 1964 18 p refs Compilation of abstracts (ATD-P-64-66; AD-609827)

Selected articles from the Soviet open literature are reviewed under three general headings: space medicine and biology, space physiology, and space vehicle ecology. In the first section are included overviews of achievements in space medicine and in the natural and social sciences. Space physiology articles are concerned with: 1) effect of high temperature and insolation on mineral salt content of body fluids; 2) distribution of body water in animals under various temperatures; 3) use of synthetic compounds to increase heat resistance of the body; and 4) changes in carbohydrate metabolism under conditions of total body vibration. An article dealing with the photosynthesis of *Chlorella vulgaris* Beyer in open-tank mass culture is reviewed in the ecology section. M.W.R.

Lawrence S. Higgins, Stuart A. Enfield, and Robert J. Marshall May 1965 151 p refs (Contract Nonr-4675(00)) (TI-65-041; AD-615442)

Available world literature on ejection-related vertebral injuries in aviators was thoroughly surveyed and is presented as an annotated bibliography. Basic findings of some of the principal investigators into vertebral injury are summarized. Parameters associated with the pilot, aircraft, and ejection-seat system are evaluated in the light of their trends and relative significance in contributing to ejection-caused vertebral injury. These studies led to the development of a proposed research design to determine the dynamic strength of isolated vertebrae. Preliminary research objectives are outlined. The experimental procedure and analysis techniques are set forth. A plan for sequencing and integrating the research operations is diagramed. Author

 6 May 1965 59 p refs
 (ATD-P-65-23)

A bibliography on Soviet laser research and associated fields, covering the period from January 1961 to September 1964, is presented. Twenty-seven participant facilities were involved in the reports covered, with the majority of the material distributed among eight key institutions. These are discussed in the descending order of contributions. Interfacility correlation among these eight key institutions is described, and a brief discussion of the leading scientists associated with the aforementioned institutions is included. A bibliography of the retrieved articles is divided into such subsections as gaseous lasers; lasers based on paramagnetic materials and on semiconductor materials; exotic lasers; spectroscopy of paramagnetic laser materials; and laser theory, applications, and effects.

A selection of annotated references to unclassified reports and journal articles on planetary atmospheres announced in *Technical Publications Announcements* (TPA), *Scientific and Technical Aerospace Reports* (STAR), and in *International Aerospace Abstracts* (IAA) is presented. Each entry in the bibliography consists of a citation and abstract. The majority of the references pertain to studies, measurements and discussions concerning the atmospheres of Mars, Venus and Jupiter, but a limited number of references to the atmospheres of Mercury and Saturn are also included. The scope of coverage was defined to permit inclusion of references to such specific topics as the theory of planetary origins, extraterrestrial environment, planetary exploration and spacecraft reentry, and the physical properties of the planets. All reports and articles cited were introduced into the NASA Information System during the period January, 1962 to February, 1965.

THE LAND AND SEA BREEZE: AN ANNOTATED BIBLIOGRAPHY

Gisela L. Baralt and Rodger A. Brown /n its Mesometeorological Field Studies Feb. 1965 62 p refs (See N65-31369 20-20)

An annotated bibliography is presented on the land and sea breeze. The earlier papers deal with observation or qualitative theory while the more recent deal with the quantitative aspects of land and sea breeze theory. Theoretical studies in the past ten years have employed computers to handle the detailed observations. In addition to pure breeze studies, many papers emphasize factors related to the land and sea breeze. Others stress the therapeutic values of land and sea circulations and their role in forest fire control around coastal regions. Also included are studies on gravity waves, refractive index anomalies, electrical potential gradient and ionization of the air, and ground radiation balance associated with sea breezes.

INVESTIGATION OF BASIC FACTORS INVOLVED IN THE FORMULATION AND CHARACTERIZATION OF ALUMINUM COMPLEX IMIDO ACIDS AS HIGH TEMPERATURE GREASE THICKENERS

Ernest L. Plummer Oct. 1964 28 p refs
(AFML-TR-64-324; AD-610248)

This report covers recent studies of aluminum salts of substituted benzoic acids for use as high temperature grease thickeners. It has been shown that although aluminum tri-benzoate can be prepared by the reaction of aluminum isopropoxide with benzoic acid, it is hydrolytically unstable and, on exposure to moisture, hydrolyzes to aluminum dibenzoate monohydroxide. A literature survey on aluminum salts is included in addition to infrared and thermal gravimetric analysis data on the aluminum salts which have been prepared. Author

POLARIMETRY AND THE LUNAR SURFACE A Literature Survey

W. G. Egan Apr. 1965 61 p refs
 (RM-271)

Light reflected by illuminated materials exhibits polarization, with properties dependent upon the nature of the surface and the angles of incidence and observation. This is caused by reflection, scattering, diffraction, single and double refraction, and absorption, with all processes occurring simultaneously. A survey was made of the literature on planetary polarization, with particular emphasis on that of the lunar surface, and the results are presented herein. Following a short introduction and history, a brief synopsis of polarization theory and photometric definitions is presented. A description of measuring devices ensues, with data presented on lunar observations and laboratory measurements. Particular emphasis is placed on the work of the French group (Lyot, Dollfus), but not to the exclusion of the Russian workers. The conclusion summarizes the present state of the art, and outlines areas where further investigation is required. An extensive bibliography is included. Author

(Grant NsG-533)

(NASA-CR-67721) CFSTI: HC \$1.00/MF \$0.50 CSCL 11F

The purpose of this research was to evaluate the effect of ultrasonic energy in producing a dispersed phase during the metallurgical processing of alloys. Three systems which were investigated included: the effect of insonation during the solidification of cast iron on the distribution of graphite and pearlite formation, the effect of insonation on the decomposition of iron carbide in white cast iron during heat treatment, and the dispersion strengthening of aluminum alloys. Ultrasonic vibrations were introduced into the alloys by means of a high purity nickel rod attached to the transducer which operated at a frequency of 20 000 cycles per second with a maximum sonic output of 75 watts. Insonation during solidification of gray cast iron produced more ferrite, less pearlite and more nodular graphite particles when compared with a non-isonated reference specimen. Author

RADIOISOTOPE HEAT SOURCE EVALUATION PROGRAM Final Report, 15 May-13 Dec. 1964

[1964] 246 p refs

(Contract NAS5-3849)

(NASA-CR-68182) CFSTI: HC \$6.00/MF \$1.50 CSCL 18B

The primary objective of the radioisotope heat source evaluation program was the compilation of an annotated bibliography on the nuclear characteristics of the following isotopes: strontium-90, cesium-134, cesium-barium-137, promethium-147, polonium-210, plutonium-238, curium-242, and curium-244. A secondary objective of the program was the generation of a Fortran computer program capable of computing the low energy bremsstrahlung (< 250 kev) emanated by candidate isotopic fuels. Promethium 147 was used as a typical radioisotope. At the beginning of each isotope section, the best values for the nuclear characteristics of that isotope are presented. These characteristics are: half life, spontaneous fission half life (when applicable), energy levels, decay schemes, spins, alphas/spontaneous fission (when applicable), and neutrons/spontaneous fission (when applicable). The bremsstrahlung computer program was tested using promethium-147 oxide as a typical case. In addition to the program proper a flow diagram of the program is presented along with graphs of the generated bremsstrahlung spectrum.

BIBLIOGRAPHY AND SUMMARY OF METHODS RELATED TO THE ERROR ANALYSIS OF HYBRID COMPUTERS

(Contract NAS8-2473)

(NASA-CR-68405) CFSTI: HC \$2.00/MF \$0.50 CSCL 09B

A summary is presented of current methods used in attacking the error problems present in analog computers, sampled data systems, and hybrid computers. The survey indicates that the best approaches to error analysis of hybrid computers are probably the use of sensitivity coefficients based on a modification of the method of Miller and Murray, and the use of root shifting techniques in linear problems or problems which can be linearized. In both approaches, approximations for transfer functions of different components and the use of a variety of mathematical tools such as Z transforms will be helpful. (NASA-CR-68407) CFSTI: HC \$3.00/MF \$0.75 CSCL 07D

An annotated bibliography citing references for theoretical and experimental studies on the chemistry of comets is presented. The experimental studies referred to are designed primarily to derive an explanation of the chemical processes and mechanisms responsible for the formation of the emitting species observed from the spectra of comets. The theoretical studies refer to investigations initiated to describe the nucleus, coma, and tail in terms of structure, composition, temperature, evaporation, photodecomposition, and interaction with protons, electrons, and radiowaves. The references

are divided into three areas: (1) those which report the results of land-based observations and the theoretical interpretations resulting from these observations, (2) those which report data obtained in the laboratory as a direct result of experimentation, and (3) those which report proposed plans for space investigations of comets.

UPPER ATMOSPHERES OF THE PLANETS

Joseph W. Chamberlain (Kitt Peak Natl. Obs.), and Richard M. Goody (Harvard Univ.) /n its Space Res. Dec. 1965 p 96-107 refs (See N66-14327 05-30) CFSTI: HC \$4.00/MF \$0.75

A priority system is set up for experiments dealing with planetary upper atmospheres, and a bibliography is included for articles on the subject. Studies serving engineering requirements for support of exploration are considered urgent; programs related to exobiology and the evolution of life are rated important; and research bearing on the origin and evolution of the solar system is classified as desirable. The general area of illuminating the comparative anatomy of atmospheres is considered as academic. A recommended program for obtaining data considers topside sounders, airglow measurements, densities from drag data, magnetic fields, special scans of resonance lines, Raman spectra, ultraviolet photometry and absorption from sunlight, far infrared emissions, and occultations. The bibliography lists articles according to (1) general reviews, (2) atmospheric evaporation and evolution, and planetary coronas, (3) composition and photochemistry, (4) structure of upper atmospheres and ionospheres, and (5) airglow and other optical measurements. Some of the references are annotated. M.W.R.

The compilation presented in this bibliography has been prepared as a literature survey in support of an experimental and development program of research on gas lubricated bearings. The bibliography is a continuation of a similar work issued in October 1961. It contains 493 abstracts. It covers the magazine, book, periodical technical report and patent literature, both domestic and foreign. Most of the abstracts are either author's or author modified type. It is arranged in chronological order from January 1961 through December 31, 1964, according to the date of publication. The first two digits of the five digit number of each reference indicate the year. Some 55 sources, which were not recorded in the previous bibliography, are also abstracted. The bibliography is provided with an author index (corporate and individual), subject index and patent index. Author

WEATHER SATELLITES: TIROS AND NIMBUS LITERATURE SURVEY

Jun. 1965 74 p refs

(TDCK-42600) CFSTI: HC \$3.00/MF \$0.75

Abstracts of selected articles dealing with Tiros and Nimbus satellite observations and a review of weather satellite launchings and observational instrumentation are included in a literature survey listed chronologically in four separate sections. The first chapter includes general background information and deals with objectives and capabilities of weather satellites; design, instrumentation, and evolution of the Tiros system; and plans for future developments. A chapter on design and instrumentation considers weather satellites and their systems, optical instrumentation, radiation experiments, ground stations, and data processing. The section on cloud photography and nephalanalyses contains abstracts on cloud pattern and structure, satellite observations, synoptic interpretation, and comparisons of Tiros photography with conventional meteorological observations. In the last chapter are reviews dealing with radiation data interpretation and satellite measurements.

A REVIEW OF LITERATURE ON NUCLEAR AND REACTOR TECHNOLOGY [LITERATUUROVERZICHT, ATOOMKERN-TECHNIEK EN REACTORKUNDE]

Sep. 1965 28 p refs In DUTCH, ENGLISH, FRENCH, and GERMAN *Its* Vol. 7, no. R-78 CFSTI: HC \$2.00/MF \$0.50

Abstracts of reports relating to nuclear and reactor technology are presented. Work is reported for turbo-machinery for high temperature gas-cooled reactors; moderator materials; projection effects on heat transfer and pressure losses in channel flow; special fabrication techniques for cladding and structural materials; reactor instrumentation; and nuclear fuel element pellet sintering. Also reported are a filter pack technique for the classification of radioactive aerosol by particle size; thermoluminescent and radiophotoluminescent methods for dosimetry; optical properties of titanium dioxide as a reflector for plastic scintillators; and electron-bombardment damage in silicon solar cells. Nuclear safety; radon concentration in air; and technical news are also discussed. L.S.

STRUCTURE OF ORGANIC CRYSTALS (SURVEYS OF SOVIET SCIENTIFIC AND TECHNICAL LITERATURE)
Annotated Bibliography
 Victor Seemann 30 Dec. 1965 23 p refs
 (ATD-65-104)

An annotated bibliography of research studies on organic crystal structure is presented. The bibliography is based on Soviet open-source materials available at the Aerospace Technology Division and other divisions of the Library of Congress. Entries contain brief annotations indicating the method of investigation, equipment used, and resulting data. Materials investigated include: dinitronaphthalene, quasiaromatic copper complexes, alpha-pinene molecules, polyacrylonitrile, diacidodiethylenediamine compounds, viscose cord fiber, pepsin, liquid crystals, Rochelle salt, polytrifluorochloroethylene, 1-phenylalanine hydrochloride, biferrocenyl structure, polybenzimidazoles, pentaerythritol, dinitroalkanes, diurenes, diguanidines, cellulose nitrates, dicyandiamide, cellulose ethers, polypropylene spherulites, ferrocenedisulfonyl chloride, stearates of Co(II) and Ni(II), and diphenylmercury. Appendices containing indices of authors and associations are also included. M.R.W.

 (T5-1585/3111; AD-469876)

This selected bibliography is prepared to provide readily available information on digital magnetic recording techniques and materials in support of the MEM-BRAIN Disk File Internal Research and Development Program. This program consists of the development of a two gigabit mass storage device. The main topics covered in the literature search are: Magnetic Recording Techniques, Magnetic Recording Materials, Magnetic Recording Heads, and Disk-Drum File Applications. This bibliography contains 129 references which include reports, papers and periodical articles covering the period from 1959 through June 1965. Author (TAB)

BEHAVIOR IN UNUSUAL ENVIRONMENTS
 William Bevan *In its Evaluation of Perceptual Frames of Reference* Nov. 1965 56 p refs Submitted for Publication (See N66-16506 07-04) CFSTI: HC \$4.00/MF \$1.00 (TR-33)

The concept of environment, as it has been understood by psychologists during the past half century, is examined, and a substantive review of the pertinent literature during the last decade is provided. Environmental properties that have characterized the psychologist's use of the term in theoretical formulations and investigational practice are considered. Empirical relationships that exist between behavior and unusual environments are also discussed. It is

pointed out that while environment as a concept has achieved a degree of formal articulation, it lacks systematic versatility; there are few clearly established bridges between its place in psychological theories and in the empirical practices of the psychological investigator. The value of focusing attention on environment as a variable in observational situations, and as a systematic concept is also pointed out. A comprehensive bibliography is included. M.G.J.

A summary of the evidence on exposure to structureless visual fields is presented. The data show the experience of such fields to be characterized by reports of immersion in a sea of light which separates into figure and ground as brightness is increased, chromatic adaptation in colored fields, loss of efficiency in detecting the presence and movement of inhomogeneities introduced into the field, disorientation of the observer, an increased and fluctuating state of accommodation, and the occasional joint occurrence of an apparent cessation of function of the visual mechanism and increased alpha activity in the brain. EXTRATERRESTRIAL LIFE—A BIBLIOGRAPHY. PART II: PUBLISHED LITERATURE, 1900-1964
 Dec. 1965 345 p refs
 (NASA-SP-7015) GPO: HC \$2.00; CFSTI: MF \$1.75 CSCI 06C

An annotated bibliography of articles and books on extraterrestrial life published during the period 1900 to 1964 is presented. Although the bibliography is primarily concerned with the general subjects of extraterrestrial life and exobiology, its scope also makes provision for several particular topics that are directly pertinent to the search for extraterrestrial life. Included among these are the origin of life on earth, the suitability of other planets for the development of indigenous life, the possibility of intelligent extraterrestrial life forms, techniques and instrumentation for the detection of extraterrestrial life, the chemical basis of life including the synthesis of organic compounds from simple precursors, and terrestrial contamination of spacecraft. Several references which describe the examination and analysis of meteorites and the relevance of such studies to the subject of extraterrestrial life are also presented. C.T.C.

COMPOUND SEMICONDUCTORS Surveys of Communist World Scientific and Technical Literature

Boris Ofrossimow 30 Dec. 1965 79 p refs (ATD-65-99)

This analytical survey is based on Soviet-Satellite open sources published 1963-1964. It is the first report in this

series and it consists of a foreword, an analysis of data for the entire year 1963, and an annotated bibliography with 139 entries. Section 1 of the bibliography (AIII BV compounds) is comprised of 46 entries, Section 2 (AII BV compounds) of 70 entries, and Section 3 (AIV BV compounds) of 3 entries. There are 3 appendixes: (1) Topic Tags Index; (2) Author Index; (3) Associations Index. The following compounds are covered: indium phosphide, indium antimonide, gallium antimonide, gallium arsenide, gallium phosphide, aluminum nitride, cadmium telluride, gallium nitride, indium nitride, boron phosphide, cadmium selenide, cadmium sulfide, mercury sulfide, zinc sulfide, zinc telluride, mercury telluride, and silicon carbide. According to the analyst the following trends have become apparent: (1) the number of studies made by non-centrally located scientific institutions has increased at the expense of the central institutes; (2) a certain specialization of research institutions is apparent; (3) new facilities are being developed.

An information retrieval system is described for literature dealing with postcrash aircraft fire, rescue, and evacuation. The system uses a code book, an IBM tab run, and a bibliography with an abstract for each document. The user can find a code number for the specific area of interest, identify the applicable documents, and then read the abstracts to determine which documents he would like to acquire. The system is capable of indexing specific items and requires no manipulation of IBM cards to identify needed references. (TR-65-114; AD-626405) CFSTI: HC \$3.00/MF \$0.50

A bibliography of available literature on array technology has been compiled, embracing the disciplines of seismology, acoustics, and radio. Over one hundred articles from various scientific journals are listed. Most of the articles are abstracted and are grouped according to a major category. Field of Application, and a subcategory, Character of Content. The majority of the articles were published during the period 1955-1956. Author (TAB)

FLUERICS (FLUID AMPLIFICATION) Bibliography

30 Aug. 1965 158 p refs

(TR-1304; AD-625885) CFSTI: HC \$5.00/MF \$1.00

A bibliography of flueric (fluid amplifier) devices and theory is presented with abstracts for the majority. The bibliography includes 376 titles on fluid devices, fluid circuits, sensors and transducers, instrumentation and flow visualization, fabrication, patents and disclosures, and other directly applicable technology. It also includes titles on related topics such as jets; vortex flow; pipes, passages, and diffusers; and vibration and acoustic effects. Author (TAB)

EFFECTS OF NONLINEARITIES ON HUMAN OPERATOR TRACKING PERFORMANCE: A REVIEW OF THE LITERATURE Final Report, Sep. 1964-May 1965

Richard J. Wasicko and Raymond E. Magdaleno Wright-Patterson AFB, Ohio, AMRL, Oct. 1965 50 p refs

(Contract AF 33(615)-1782)

(AMRL-TR-65-158; AD-626036) CFSTI: HC \$2.00/MF \$0.50

Available literature on the effects of system nonlinearities on human operator tracking performance is summarized. The reviewed reports include experimental investigations in the technical areas of human engineering and aircraft handling qualities. Pertinent information is presented on experimental details, types of nonlinearities and other experimental variables tested, and primary results; and it is concluded that the general state of knowledge in this area is unsatisfactory. Several nonlinearities (such as actuator rate limiting) important in aircraft manual control systems have not been experimentally investigated, and there is inadequate data on the influence of forcing function characteristics. James E. Wollrab 4 Aug. 1965 106 p refs

(RD-TM-65-14; AD-625846) CFSTI: HC \$4.00/MF \$0.75

The references listed in the bibliography include a majority of the important papers and books that are related to the development of microwave spectroscopy. General references relating to the basic concepts of rotational and, in a limited way, vibrational spectroscopy are also included. The references have been placed under specific topic headings whenever possible. A chronological order under these headings is maintained. Author (TAB)

RESEARCH ON SELECTED MICROWAVE PROPERTIES OF FERRITES Final Report, 1 Apr. 1962–28 Feb. 1965

(Contract AF 19(628)-342)
(AFCL-65-665; ML-1343; AD-625315) CFSTI: HC \$1.00/MF \$0.50

Controlled steering of a microwave acoustic beam in a ferrite was demonstrated in a YIG rod, where the direction of an acoustic beam was varied by varying the magnitude of a dc magnetic field applied at an angle to the rod axis. Analysis has been made of the frequency passband characteristics of multiple film acoustic transducers for microwave frequencies. The theory of microwave dielectric resonators without conducting walls has been developed, and experimental results on the principal circuit properties of rutile resonators have been obtained. A theory has been developed for mechanisms contributing to the excitation of phonon instabilities in ferrites. A theory has been developed for the coupling efficiency of ferrite disks as magnetostriuctive acoustic transducers. Experimental investigations of nickel film magnetostriuctive transducers have been performed. Measurements have been made of acoustic attenuation at room temperature in sapphire and rutile, which have disclosed that these materials offer low loss

acoustic wave transmission at microwave frequencies. Theoretical and experimental investigations of second harmonic generation in ferrites have established the upper bounds on conversion efficiency for low loss ferrites. TAB

INTERACTIONS OF SPACECRAFT AND OTHER MOVING BODIES WITH NATURAL PLASMAS

(Contract NAS7-100)

(NASA-CR-71204; JPLAI/LS-541) CFSTI: HC \$5.00/MF \$1.25 CSCL 201

An annotated bibliography of 829 selected references on astronautics information resulting from a literature search and covering the period 1960 through June 1965 is presented. It is pointed out that recent space exploration has provided data on the interactions of a moving spacecraft (satellite, rocket, or missile) with the surrounding ionized medium—ionosphere, magnetosphere, or interplanetary plasma. The practical aspects of the complex and interrelated electrical and magnetic phenomena are of primary interest. These include electrical hazards to spacecraft; effects on spacecraft communications, tracking, and detection; and effects on measurement of environmental plasma parameters. Although most of the references given concern spacecraft phenomena and related ionospheric instrumentation and data, the search also includes literature on interactions of other types of moving man-made bodies and on similar natural phenomena. The areas covered include spacecraft, aircraft, small projectiles, celestial bodies, interplanetary matter, and ionospheric research and related subjects. The bibliography also contains an author index. R.R.D.

SOLAR SYSTEM SCIENCE - 1964 LITERATURE SURVEY. I. Edna O'Connell (RAND Corp., Santa Monica, Calif.). *Icarus*, vol. 4, July 1965, p. 319-333.

Bibliography containing 275 entries on various astronomical subjects, published in the year 1964, and referring to 11 US, British, and Soviet technical publications. The entries are distributed among 11 main subject headings: atmospheric physics, cosmogony, interplanetary physics, planetary biology, meteorites, planetary geodesy, planetary geology, planetary physics, solar physics, solar-system dynamics, and solar-terrestrial relations. HEAT TRANSFER - A REVIEW OF CURRENT LITERATURE. E. R. G. Eckert, E. M. Sparrow, W. E. Ibele, and R. J. Goldstein (Minnesota, University, Dept. of Mechanical Engineering, Heat Transfer Laboratory, Minneapolis, Minn.). *International Journal of Heat and Mass Transfer*, vol. 8, Aug. 1965, p. 1053-1083.

Review of recently published literature dealing with research in the field of heat transfer. The literature on channel flow is said to emphasize noncircular geometries and the effect of variable fluid properties. The analysis of turbulent boundary layers is refined and generalized in a number of papers. The study of heat transfer in boundary layers with chemical reactions is also seen to tend toward refinement of available methods. In experiments on boundary-layer heat transfer, special attention is devoted to the effect of surface roughnesses and fin-body interactions. The gases used in such studies are said to simulate the atmospheres of Venus and Mars. The effect of thermal diffusion on heat and mass transfer is given considerable attention. Numerous experimental studies of heat transfer with phase change are described, in which the details of nucleate and film boiling processes are revealed by visual observation or photographs. The effect of promoters to establish or maintain nucleate boiling is considered. A number of investigations of regenerative heat exchangers are said to have been prompted by the development of the gas turbine. A list of 655 references is appended. A.B.K.

ELEMENTARY COMBUSTION REACTIONS - NEUTRAL SPECIES. P. G. Ashmore (Manchester College of Science and Technology, Manchester, England).

IN: SYMPOSIUM (INTERNATIONAL) ON COMBUSTION, 10TH, UNIVERSITY OF CAMBRIDGE, CAMBRIDGE, ENGLAND, AUGUST 17-21, 1964. [A65-32457 21-33]

Symposium supported by the British Section of the Combustion Institute; National Academy of Sciences-National Research Council; National Science Foundation, Grant No. GN-260; National Aeronautics and Space Administration, Grant No. NSG-506; U.S. Army, Contract No. DA-31-124-ARO-D-197.

Pittsburgh, Pa., Combustion Institute, 1965, p. 377-384; Comments, S. C. Kurzius (AeroChem Research Laboratories, Inc., Princeton, N.J.), p. 385, 386. 51 refs.

Literature survey of available papers on elementary combustion reactions with emphasis on areas of disagreement or uncertainty. The general background of work on combustion is briefly sketched. It is noted that little new information has been brought forth concerning the rates of reactions important in the slow oxidation of long-chain hydrocarbons, or concerning reactions of alkoxy or alkyl-peroxy radicals with hydrocarbons. There would seem to be need for further systematic study in this field along the lines recently suggested by Minkhoff and Tipper. M.M.

PLASMA PHYSICS - BIBLIOGRAPHY, 1955-1961 [FIZIKA PLAZMY - BIBLIOGRAFIKESKII UKAZATEL', 1955-1961]. Edited by I. S. Shpigel' and L. M. Kovrizhnykh.

Moscow, Izdatel'stvo "Nauka," 1964. 356 p. In Russian.

This literature index of theoretical plasma physics has been compiled specifically for scientists, rather than engineers. It covers roughly 7000 publications from the period from Jan. 1955 to Dec. 1961. All material is ordered in 11 major sections (with numerous subsections). The first two sections cover symposia and books, respectively. Subsequent sections deal with plasma kinetics and hydrodynamics, controlled thermonuclear reactions, elementary processes in plasmas and their kinetics, plasma spectra and emission, gas discharges, shock waves, plasma and ion engines, exploding wire phenomena, and methods used in plasma diagnostics. An author index is included. V.P.

CHRONOLOGY AND BIBLIOGRAPHY OF ESAKI DIODES.

Teruhiko Bessho and Hajime Niiyama (Nippon Telegraph and Telephone Public Corp., Electrical Communication Laboratory, Tokyo, Japan).

Electronics and Communications in Japan, vol. 47, Apr. 1964, p. 153-184. Translation.

Chronological listing, within categories, of selections (mostly US and Japanese) from the published literature on the Esaki diode for the period Jan. 1958 to Nov. 1963. The categories include (1) general principles and characteristics; (2) materials, fabrication techniques, and design; (3) measurement techniques; (4) general circuits; (5) oscillators and pulse generators; (6) amplifiers; (7) frequency converters; (8) logic circuits; and (9) memory circuits. Of the 929 entries, about half are devoted to amplifiers and logic

circuits. Recent improvements are noted that should counter the adverse reaction that set in in 1960 when early expectations for the diode were not fully realized.

BIBLIOGRAPHY.

IN: CURRENT ASPECTS OF EXOBIOLGY.

Edited by Gregg Mamikunian and M. H. Briggs.

New York, Pergamon Press, Inc., 1965, p. 359-420.

Bibliography of current aspects of exobiology, divided into sections dealing with (1) the solar system, (2) life detection systems, (3) the origin of life, and (4) life in the universe. Subsections of (1) list works discussing the subject in general terms, and others discussing terrestrial organic matter, the moon, Mars, Venus, Jupiter, other planets, and meteorites. The second section gives titles which review the subject in general, and present accounts of specific devices. In section 3 the listed titles include reviews, the synthesis of organic compounds from simple precursors, the origins of cells, the natural interplanetary transfer of organisms, the artificial transfer of organisms, and the sterilization of space vehicles. Reviews, the incidence of planets, the origin of planets, and communication across interstellar distances are the subdivisions of the fourth section.

IEEE, Proceedings, vol. 53, Aug. 1965, p. 1025-1064.

Contract No. DA-36-039-AMC-03759(E).

This bibliography consists of 1420 references from over 275 journals or other sources in the open literature, and represents contributions from over 1225 authors. Material has been selected from that now being compiled at the Georgia Institute of Technology for a comprehensive collection of abstracts and references entitled "A Bibliography of Radar Reflection Characteristics." Coverage is extensive but not exhaustive, is international in scope (with heavy representation from the Soviet literature), and is restricted to the time period 1957 to 1964. Subject coverage includes: scattering and diffraction theory, simple geometrical shapes, geophysical targets (auroras, ionosphere, meteor trails, sea surface, terrain, and angels and related atmospheric phenomena); planets and space targets; and plasmas. Other topics include: absorbers, aircraft, missiles, chaff and dipoles, acoustic scattering, laser radar, reflectors, and measurement techniques and equipment. (Author)
